Ear simulator measurement
For use with prepolarized condenser microphones

Introduction

CRY3521 is a pedestal-type universal measuring microphone preamplifier that can be used with all prepolarized condenser microphones.

The CRY3521 converts high input impedance to low output impedance, allowing longer extension cords to be used. Its advantages include low background noise and almost no load on the microphone. It can be used together with the CRY3711 ear simulator or the CRY3718 ear simulator for acoustic testing.

Highlights

- **What is IEPE?**

IEPE is a generic name for CRY SOUND products which operate on a constant current power supply. IEPE products give output signals in the form of voltage modulation on the power supply line. One of the advantages of this is that you can use inexpensive coaxial cables.

- **Compatibility**

The CRY3521 IEPE preamplifier is compatible with CRY SOUND prepolarized measurement microphones and can be used together with data acquisition hardware that supports IEPE microphones, such as the CRY6151B electroacoustic analyzer.

- **Calibration**

Each CRY SOUND preamplifier is calibrated at the factory using traceable calibration equipment. Calibration certificates are provided with each unit. CRY SOUND recommends recalibration at least once a year.

- **Quality & Warranty**

All CRY SOUND preamplifiers are made of stainless steel with good corrosion resistance and robustness, suitable for long-term storage.

CRY SOUND preamplifiers are supported by a 10-year warranty—offering one of the best service guarantee in the world.
